                                                                                                                                                                                                                                                Novel antisense compound targeted to nucleic acid molecule encoding tumor necrosis factor receptor 1 (TNFR1), useful for treating humans having disease associated with TNFR1 e.g. hepatitis, liver injury, liver cancer.
                                                                                                                                                                                                                                                                                                                                                              The invention relates to an antisense compound 8 to 30 nucleotides in length targeted to nucleic acid molecule encoding tumour necrosis factor receptor 1 (TNFR1), where the antisense compound inhibitis expression of TNFR1. The antisense compound is useful for inhibiting the expression of Treating an animal (preferably human) having a disease or condition associated with TNFR1, e.g. a liver disease (such as hepatitis, or liver injury) or a hyperproliferative disorder such as cancer, by inhibiting the expression of TNFR1. The antisense compound is useful for disquestics, therapeutics, prophylaxis and as research reagents and kits. This polynucleotide sequence represents a human oligonucleotide relating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Novel antisense compound targeted to nucleic acid molecule encoding tumor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Antisense compound; tumour necrosis factor receptor 1; liver disease; TNFR1; hepatitis; liver injury; hyperproliferative disorder; cancer; human; ds.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               antisense compound targeted to nucleic acid molecule encoding tumor
sis factor receptor 1 (TNFR1), useful for treating humans having
necrosis factor receptor 1 (TNFR1), useful for treating humans having disease associated with TNFR1 e.g. hepatitis, liver injury, liver cancer.
                                                                                                                                                                                                                               The invention relates to an antisense compound 8 to 30 nucleotides in length targeted to nucleic acid molecule encoding tumour necrosis factor acceptor 1 (TMFR1), where the antisense compound inhibiting the expression of TMFR1. The antisense compound is inhibiting the expression of TMFR1 in cells or tissues. The antisense compound is also useful for reating an animal (preferably human) having a disease or condition associated with TMFR1, e.g. a liver disease (such as hepatitis, or liver injury) or a hyperproliferative disorder such as cancer, by inhibiting diagnostics, therapeutics, prophylaxis and as research reagents and kits. This polymuleotide sequence represents a human oligonucleotide relating the target of the compound of the computer of the compute
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           necrosis factor receptor 1 (TNFR1), useful for treating humans having disease associated with TNFR1 e.g. hepatitis, liver injury, liver cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to an antisense compound 8 to 30 nucleotides in length targeted to nucleic acid molecule encoding tumour necrosis factor receptor 1 (TNFR1), where the antisense compound inhibits expression of TNFR1. The antisense compound is useful for inhibiting the expression of TNFR1 in cells or tissues. The antisense compound is also useful for treating an animal (preferably human) having a disease or condition associated with TNFR1, e.g. a liver disease (such as hepatitis, or liver injury) or a hyperproliferative disorder such as cancer, by inhibiting
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Antisense compound; tumour necrosis factor receptor 1; liver disease; TNFR1; hepatitis; liver injury; hyperproliferative disorder; cancer;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

Novel antisense compound targeted to nucleic acid molecule encoding tumor necrosis factor receptor 1 (TNFR1), useful for treating humans having disease associated with TNFR1 e.g. hepatitis, liver injury, liver cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to an antisense compound 8 to 30 nucleotides in length targeted to nucleic acid molecule encoding tumour necrosis factor receptor 1 (TNFR1), where the artisense compound inhibities expression of TNFR1. The antisense compound is useful for inhibiting the expression of treating an animal (preferably human) having a disease or condition associated with TNFR1, e.g. a liver disease (such as hepatitis, or liver injury) or a hyperproliferative disorder such as cancer, by inhibiting the expression of TNFR1. The antisense compound is useful for diagnostics, therapeutics, prophylaxis and as research reagents and kits. This polymucleotide sequence represents a human oligonucleotide relating to the TNFR1 of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention provides antisense compounds targeted to human tumour necrosis factor receptor type 1 (TNFR1) RNA. These antisense compounds can be used in a method of inhibiting the expression of TNFR1 human cells or tissues. The antisense compounds specifically hybridize with one or more nucleic acids encoding TNFR1 modulating the function of nucleic acid molecules encoding TNFR1, ultimately modulating the amount of TNFR1 produced. The antisense compounds and method are useful as research reagents and diagnostics, and in the treatment and prophylaxis of infection, inflammation or tumour formation. Sequences AAZ4812-565 represent antisense oligos used for inhibition of the human TNFR1 mRNA
                        and kits.
the expression of TNFR1. The antisense compound is useful for diagnostics, therapeutics, prophylaxis and as research reagents and kits. This polynucleotide sequence represents a human oligonucleotide relating to the TNFR1 of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

                                                                                                                                                                                                                                                                                                                        AATI6392-T16429 represent amplification primers for the human obesity polypeptide (OBP) gene sequence (see AATI6373). These sequences were used to amplify the OBP gene sequence from the YAC contig containing the human CBP gene, in a series of sequence tagged-site (STS)-specific PCR assays. There were 19 STSs found within the YAC contig human OBP gene sequence. This sequence was used in conjuncture with AATI6399 to amplify the STS and its analogues are useful for modifying body weight (optionally combined with known medicaments), for treating diabetes, high blood pressure or high cholesterol. The OBP coding sequence (and sequences complimentary to it) can be used in gene therapy for modifying body weight. The protein can be used for reducing weight for health or cosmetic reasons in obese humans, or to produce leaner food animals. Antagonists of OBP (including antibodies) are useful for increasing body weight, e.g. for treating weight loss associated with cancer, or for commentic reasons in humans, or for production of Kobe beef or Fole gras in munoassays for the presence of OBP. The formation of Ab-OBP complexes enables in vitro evaluation of levels of OBP in a sample, especially to detect diseases associated with elevated or decreased levels, and to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      0

The present sequence is a PCR primer which was used in an invention relating to the control of body weight of animals including humans. Mucleic acids of at least 10 nucleotides which are hyporidisable to a noncoding region of an OB nucleic acid have been created. The OB gene plays a critical role in the regulation of body weight and adiposity. The nucleic acids may be used as probes or as primers for PCR. They are useful for evaluating the presence of mutations in the human OB gene or for evaluating the level of expression of OB mRNA. Defects associated with OB gene expression result in obese phenotypes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             body weight; obesity; anorectic; adipose tissue; brain; human;

                                                                                                                                                                                                                                                                                        à
                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                      This invention describes a novel method for modifying body weight of an animal which comprises administering mammalian obesity (OB) polypeptide. The products of the invention have anorectic activity. The OB polypeptide at a dose of 5 mg/g/day in 300 micro litres of PBS was injected intraperitoneally into mice. Control mice were injected with PBS dialysate of the recombinant protein. The body weight of the mice was noted. The results shows that recombinant the OB polypeptide is capable of reducing a body weight and is found to be effective when it is administered daily. The OB polypeptide acts as a part of the signalling pathway by which adipose tissue communicates with the brain and other organs. (I) is useful for modulating body weight of an animal especially humans. This sequence represents a PCR primer used in the amplification of a human OB protein described in the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel antibody to mammalian obesity polypeptide useful for diagnosis and treatment of weight loss associated with disorders such as cancer, AIDS and anorexia nervosa.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human, mouse, anabolic, cytostatic, immunostimulant,
OB polypeptide inhibitor; body weight, obesity, OB gene, cancer, AIDS,
anorexia nervosa, hypertension, heart disease, Type II diabetes,
                                        Modifying body weight of an animal comprises administering mammalian obesity polypeptide obtained from humans and murine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence is a PCR primer which was used in an invention
                                                                                                                                                                                                                                                                                                                                                                                                                    ;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to an obese (ob) polypeptide, also known as leptin, expressed predominantly by adipocytes and capable of inducing reduction of body weight in an animal. The polypeptide is useful for monitoring therapeutic treatment of a disease associated with elevated or decreased levels of ob polypeptide in a mammalian subject; for use in radioimmunoassays for measuring fat and/or plasma levels of ob protein or for detecting the presence and level of receptor for ob on tissues, such as hypothalamus; for screening expression libraries to isolate active receptors; for use in cosmetics by improving body appearance by reducing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New obese polypeptide useful for inducing reduction of body weight in an animal, for preparing a composition for treating obesity, disease associated with obesity such as hypertension, heart disease or type II

Attibodies against the mammalian obesity (OB) polypeptide have been identified. The antibodies are useful for modulating the activity of OB pathological The antibodies are useful for modulating the activity of OB to control body weight and fat content and/or to treat certain pathological conditions in which there is abnormal depression or elevation of body weight. The antibodies are used to treat weight loss associated with cancer, AIDS and anorexia nervosa. They are useful for the diagnosis of nutritional disorders such as obesity and diseases associated with obesity, such as hypertension, heart disease and Type I diabetes. The kits are used to determine the presence or amount of OB it he blood or plasma of an individual
                                                                                                                                                                                                                                                                                                                                                                       Gaps

an animal comprising administering an obese gene (OB) polypeptide analogue, capable of modulating body weight and adiposity. The inventhas ancrectic and anabolic activity, ABC1415-ABL61468 represent PCR primers used in the detection of sequence tagged sites (5TS's) and

```
conjugation with other cosmetic strategies e.g. surgery for its ossmetic effect; for identifying agonists or antagonists that affect its activity and has potential agicultural uses e.g. increasing the body weight of animals. Nucleic acid encoding the polypeptide is useful for identifying measurement of its encoded RNA and protein in nutritional disorders. A host cell transfected with a vector expressing the polypeptide is useful in the preparation of modulators of the polypeptide is useful in the preparation of modulators of the polypeptide is useful in the preparation of modulators of the polypeptide is useful in the preparation of modulators of the polypeptide in sample; for evaluating the presence of the polypeptide in a sample; for evaluating the presence of disease associated with elevated or decreased levels of ob polypeptide in a mannalian subject; for imagines ob polypeptide in subject; for imagines ob polypeptide is useful for reducing body weight of an animal, in particular humans. A composition comprising an antagonist of the polypeptide is useful for increasing body weight of an animal. Compositions containing the polypeptide and the antagonist are useful for reating obesity, weight loss associated with obesity such as hypertension, heart disease or type II diabetes. The present sequence represents a human sequence tagged

The OB polypeptide is useful for reducing body weight in conditions of obesity, and as a target for neutralising antibodies which results in weight gain (protein therapy), for treating weight loss ansociated with cancer, acquired immunodeficiency syndrome (AIDS) or anorexia nervosa. This sequence represents a primer associated with the isolation of the human obese (ob) or leptin gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       OB polypeptide; obese polypeptide; leptin; body weight; obesity; weight gain; protein therapy; weight loss; cancer; AIDS; human; acquired immunodeficiency syndrome; anorexia nervosa; PCR; primer; ss.
